Summary

Full stack engineer who ships AI features to production: 3+ years building SaaS in TypeScript, React, Next.js, Node.js, MongoDB and PostgreSQL. MSc Artificial Intelligence (Distinction) from Queen Mary University of London, with a dissertation on detecting hallucinations in local RAG.

Skills

Languages: TypeScript, JavaScript, Python, SQL
Front End: React, Next.js, React Native, Material UI, React Query, Mapbox GL, Chart.js, Apache ECharts, Plotly
Back End: Node.js, Express, REST APIs, Socket.IO, Flask, MongoDB, PostgreSQL, Prisma, DynamoDB, Redis
Cloud and Tools: AWS, Microsoft Azure, Docker, GitHub Actions (CI/CD), Git, Twilio, Stripe, SendGrid
AI/ML: LLMs, RAG, Chroma, LLM evaluation, Prompt Engineering, OpenAI, PyTorch, TensorFlow, Hugging Face

Experience

REHQ **Nov 2025 – Present**
Full Stack Developer *Florida, US (Remote; part-time, then full-time)*

- Build an AI prospecting and CRM platform (178 users, $100,000 in revenue) as one of about six developers.
- Delivered the Twilio calling features (1,429 calls in one month): a power dialer through owner lists, call recording and transcripts, AI call summaries that create follow-up tasks, and live call updates over Socket.IO.
- Built map prospecting across 160M+ US properties on ATTOM and Regrid data, with parcel search, team lists and skip tracing, and email and SMS sequences sent from the user's own mailbox.
- Shipped self-serve onboarding and a freemium plan with Google and Microsoft SSO, a local Twilio number per user and Stripe upgrades, and rebuilt the CRM and the team dashboard.
- Implemented Google CASA security: CSRF protection, login rate limiting, admin OTP and schema validation.

Agencybox **Jun 2024 – Nov 2025**
Full Stack Engineer *Nevada, US (Remote, part-time)*

- Led the architecture and full stack build of TOW123, an on-demand roadside assistance platform: customer and provider apps in React and React Native on one Node.js, Express and MongoDB back end.
- Engineered live driver tracking and Uber-style matching of each request to the nearest available provider within minutes, with Redis caching the location queries, plus the dispatch board and provider reports.

SOCO Engineers **Mar 2024 – Jun 2025**
Software Engineer and Front End Team Lead *Lahore, Pakistan (Full-time)*

- Led the front end team for SIMuSPACE, a simulation process and data management platform used by a research department at BMW, and rebuilt its whole front end in Next.js on top of Java and Python services.
- Created licence monitoring, quality assurance and optimisation dashboards in Apache ECharts and Plotly, and cut their load on large simulation datasets from 8–9 seconds to under 2.5 seconds with memoisation.

Clustox **Jun 2023 – Feb 2024**
Software Engineer *Lahore, Pakistan (Full-time)*

- Developed the AWS integration and real-time conversation of My Friend, an AI voice assistant for children built for 50+ concurrent sessions, using WebSockets, S3, DynamoDB and PostgreSQL.
- Used AWS Transcribe for AI transcription, prompt engineering to shape OpenAI replies, AWS Polly for the voice, and a Chroma vector store for each child's memory.

Consulting Projects

AlgoTracks, Technical Consultant, Lahore, Pakistan (part-time, project-based) **Oct 2023 – Dec 2025**

- 121 Air Sea Cargo (Mar – Dec 2025): architected and led the build of a Dubai freight company's operations system: jobs, VAT invoices and audit log (Next.js, TypeScript, Express, PostgreSQL, Prisma).
- Jarvis and Career Buddy (2024): a lead tracker whose AI writes SMS and email campaigns and replies to leads, and an AI tutor with GPT lessons and quizzes, both built end to end (Next.js, Node.js, OpenAI).
- Landscape AI (2024): redesigns a backyard from one photo with Hugging Face image models behind a Flask API; handled the client relationship, tech stack choices and delivery.

Education

Queen Mary University of London **2025 – 2026**
MSc Artificial Intelligence, Distinction *London, United Kingdom*

- Dissertation: Detecting Natural Hallucinations in Local RAG. Built a local RAG pipeline, hand-labelled 345 claims, and showed that combining two LLM judge families with a span detector raised F1 from 26.1% to 38.1%.

FAST National University (FAST-NUCES), BSc Computer Science, Dean's List **2019 – 2023**

Certifications

Microsoft Certified: Azure Fundamentals (AZ-900), 2023; HackerRank Frontend Developer (React), 2024; Prompt Engineering for ChatGPT (Vanderbilt University, Coursera), 2023.
